

LexiPro Forensic OS Executive Overview

Product:

LexiPro Forensic OS

What it is:

A deterministic forensic operating system that physically grounds AI outputs to immutable documentary evidence,

The problem (Lexis framing):

Generative AI cannot be trusted in litigation. Hallucinated citations equal liability and reputational risk.

Your solution (non-marketing):

Mandatory anchor grounding. SHA-256 chain-of-custody. Fail-fast enforcement (422 on ungrounded output).

Why Lexis should care:

Reduces legal AI risk exposure. Drops hallucination rate to zero by design. Slot-in augmentation to Lexis+ AI, CoC

Status:

Functional prototype. Enterprise-oriented architecture. Acquisition-ready asset (not a hobby app).
